Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a composition and film derived therefrom, classified in class 106, subclass 287.13.
- II. Claims 7-8, drawn to a semiconductor comprising a film, classified in class 438, subclass 780.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). Similarly constituted films are employed in a host of applications aside from the manufacture of electronic devices.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Drew Meunier on December 20, 2005 a provisional election was made without traverse to prosecute the invention of Group II, claims 7 and 8. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-6 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Nishikawa et al., JP 2000-309753 A. They disclose a spin-on composition that exhibits exemplary properties as an interlayer insulation film (paragraph 1) including crack- and oxygen plasma resistance and low dielectric constant. The film is prepared by co-condensing alkoxysilanes delineated as component (A) with a component (B) adhering to formula 2. Preferred embodiments of (A) and (B) are outlined in paragraphs 14-16 and 17 respectively. Notably, paragraph 17 identifies numerous compounds that comply with the structural limitations of compound (3) of claim 7 where either the subscript "e" or the subscript "f" is equal to zero. Concerning claim 8, similar orientations of a film made from these materials is contemplated in paragraph 40.

Claims 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Nishikawa et al., JP 2000-309753 A. This reference contains much the same subject matter as does the '751 document, and in the same places.

Lee et al., U.S. Patent No. 6,908,977, Kodoma et al., JP 7-102215 A, Itou et al., U.S. Patent # 5,288,830, Akiyama et al., U.S. Patent Application Publication No. 2005/0096415, and Shin et al., U.S. patent Application Publication No. 2005/0038220 are cited as being of interest but either do not qualify as prior art or are not especially germane to the claimed invention.
